

**METHOD, SYSTEM AND PROGRAM PRODUCTS FOR MANAGING
I/O CONFIGURATIONS OF A COMPUTING ENVIRONMENT**

Abstract of the Disclosure

Input/output (I/O) configurations of a computing
5 environment are managed. This management includes
dynamically adjusting an I/O configuration, when it is
determined that such an adjustment is needed or desired. In
order to make the adjustment, a channel path is selected
10 from a plurality of channel paths. The selection of the
channel path to be used in the adjustment is based on one or
more characteristics associated with the channel path.
